

Summer Math Learning Packet

Students entering Math 7

The daily activities in this summer math packet will review math concepts and skills of the grade that has just been completed during the 2013-2014 school year. Just a few minutes each day spent “thinking and talking math” will help reinforce the math that has been learned and begin to bridge the foundation for extending to the concepts that will be developed next year. The goal is for you to have fun thinking and working collaboratively to communicate mathematical ideas. While you are working ask how the solution was found and why a particular strategy was chosen.

The math practice in this summer packet addresses the Fairfield Public School Curriculum for Mathematics which incorporates the Common Core Standards addressing these 5 critical areas from the Math 6 course:

- 1) Completing understanding of division of fractions and extending the notion of number to the system of rational numbers, which includes negative numbers,
- 2) Connecting ratio and rate to whole number multiplication and division, and using concepts of ratio and rate to solve problems,
- 3) Writing, interpreting, and using expressions and equations,
- 4) Reasoning about relationships among shapes to determine area, surface area, and volume,
- 5) Developing understanding of statistical thinking.

The packet consists of 2 calendar pages, one for June/July and one for August, as well as directions for math games to be played at home. Literature, worksheets, APPs and websites are also recommended to explore mathematics in new ways. We encourage you to complete at least 15 math days each month. Keep track of your math in a journal.

Educational and Fun APPS and Websites to Practice Math

Student Accountability

I spent at least 10 minutes a day, 4 to 5 times a week, practicing math. I completed at least 250 – 300 minutes of math practice over the course of the summer. I recorded my minutes on the tracking sheet. I returned the recording sheet to my 7th grade math teacher. I also showed my teacher my journal where I kept track of my mathematical thinking.

Math 7 Summer Work Calendar

June/July 2014

29	30 At Books Unlimited, 3 paperback books cost \$18. What would 7 books cost? How many books could be purchased with \$54?	1 In trail mix, the ratio of cups of peanuts to cups of chocolate candies is 3 to 2. How many cups of chocolate candies would be needed for 9 cups of peanuts?	2 A tank is 24 cm wide, and 30 cm long. It contains a stone and is filled with water to a height of 8 cm. When the stone is pulled out of the tank, the height of the water drops to 6 cm. Find the volume of the stone.	3 If it took 7 hours to mow 4 lawns, then, at that rate, how many lawns could be mowed in 35 hours? At what rate were lawns being mowed?	4 Holiday	5
6	7 What is the prime factorization of 32?	8 Some kids like to ride their bikes to and from school. Let d be the distance in miles from a kid's home to school. Write 2 expressions to represent how far a kid travels by bike in 4 weeks.	9 Try a new activity at http://www.coolmath4kids.com/ . Challenge yourself. What did you chose to do?	10 List all the factors of 48. List all the factors of 64. What are the common factors of 48 and 64? What is the greatest common factor of 48 and 64?	11 Write an expression to represent the situation. The skating rink charges \$100 to reserve and then \$5 per person. Write an expression to represent the cost for any number of people.	12
13	14 The temperature is -28°F in Anchorage, Alaska and 65°F in Miami, Florida. How many degrees warmer is it in Miami than in Anchorage?	15 Seth wants to buy a new skateboard that costs \$169. He has \$88. If he earns \$7.25 an hour pulling weeds, how many hours will he have to work to earn the rest of the money needed?	16 Lin rode a bike 20 miles in 150 minutes. If she rode at a constant speed, how far did she ride in 15 minutes? How long did it take her to ride 6 miles? How fast did she ride in miles per hour?	17 If the mean, median, and mode are all equal for the following set, what is the value of x ? {3, 4, 5, 8, x }	18 Alisa had $\frac{1}{2}$ liter of juice in a bottle. She drank $\frac{3}{8}$ liters of juice. What fraction of the juice in the bottle did Alisa drink?	19
20	21 Look up a math topic and read about the history. Who discovered it? How was it used? Ex. pi, gallons, metric...	22 Try "Beatcalc" at http://mathforum.org/index.html	23 What is the smallest number that is divisible by 1,2,3,4,5,6,7,8,9 and 10? How do you know?	24 Mia walks her dog twice a day. Her evening walk is two and a half times as far as her morning walk. At the end of the week she says she walked her dog 30 miles. How long is her morning walk?	25 Find two numbers that have 2,3, and 5 as factors.	26
27	28 The temperature in Alaska was 23 degrees below zero and in Maine was 14 degrees below zero. Ben wrote <i>Maine was colder because $-14 < -23$</i> . Is Ben correct? Explain your answer.	29 Try one of the recommended websites. Record what you did.	30 Will this net form a triangular prism? 	31 The Patriots beat the Giants in a football game. The sum of their scores was 44. The difference of their scores was 20. How many points did the Patriots score?		

Math 7 Summer Work Calendar August 2014

					1 Choose a geometry activity at Math Illuminations http://illuminations.nctm.org/Games-Puzzles.aspx	2
3	4 Visit the website http://nlvm.usu.edu/en/nav/vlibrary.html Challenge yourself with fun activities! List them.	5 Play Sudoku from the Newspaper. How did logic help you to solve the puzzle?	6 The average of six numbers is 4. A seventh is added and the new average is 5. Find the seventh number.	7 Sophia's dad paid \$43.25 for 12.5 gallons of gas. What is the cost of one gallon of gas?	8 Bryan sells candy bars at 4 for 50¢. How many candy bars must Bryan sell in order to make \$5.00?	9
10	11 Are $3(3x - y)$ and $12(x - 4y)$ equivalent expressions?	12 Try one of the recommended websites. Record what you did.	13 The lowest temperature ever recorded on earth was -89°C in Antarctica. The average temperature on Mars is about -55°C . Which is warmer? Write an inequality to support your answer.	14 What is the largest possible area (in square inches) for a rectangle with a perimeter of 120 inches?	15 If Terri swam 3 laps in 2.5 minutes, how long would it take her to swim 20 laps at the same rate?	16
17	18 What is a real life example of: $3/4 \div 1/2 =$	19 What is the smallest three digit number that is divisible by exactly three different prime numbers?	20 Given an expression such as $3x + 2y$, find the value of the expression when x is equal to 4 and y is equal to 2.4.	21 A B C D $\underline{\quad} \times 4$ D C B A What is the value of A, B, C, and D if they are each a different digit?	22 Find the sum of the first ten prime numbers.	23
24	25 Denver's elevation is 5280 feet above sea level. Death Valley's is -282 feet. Is Death Valley located above or below sea level? Explain. How many feet higher is Denver than Death Valley?	26 Amy has a fish tank that is a rectangular prism, 20 cm by 20 cm by 16 cm. What is the volume of the tank? If Amy only fills the tank $3/4$ of the way, what will be the volume of the water in the tank?	27 Alex is painting 4 exterior walls of a rectangular barn. The length is 80 feet, width is 50 feet, and height is 30 feet. The paint costs \$28 per gallon, and each gallon covers 420 sq. feet. How much will it cost? Explain.	28 YOU DID IT! Please bring your journal to your seventh grade teacher on the first day of school!	29	30

Math 7 Answer Key

Answers will vary for many of the activities depending on the choices students make. Here are the answers for activities with specific solutions.

June 30

To find the price of 1 book, divide \$18 by 3. One book is \$6. To find the price of 7 books, multiply \$6 (the cost of one book times 7 to get \$42. To find the number of books that can be purchased with \$54, multiply \$6 times 9 to get \$54 and then multiply 1 book times 9 to get 9 books.

Number of Books	Cost
1	6
3	18
7	42
9	54

July 1

One possible way to solve this problem is to recognize that 3 cups of peanuts times 3 will give 9 cups. The amount of chocolate will also increase at the same rate (3 times) to give 6 cups of chocolate.

Students could also find the number of cups of chocolate candies for 1 cup of peanuts by dividing both sides of the table by 3, giving $\frac{2}{3}$ cup of chocolate for each cup of peanuts. To find the amount of chocolate needed for 9 cups of peanuts, students multiply the unit rate by nine ($9 \times \frac{2}{3}$), giving 6 cups of chocolate.

July 2

This problem is based on Archimedes' Principle that the volume of an immersed object is equivalent to the volume of the displaced water. While the stone itself is an irregular solid, relating it to the displaced water in a rectangular tank means that the actual volume calculation is that of a rectangular prism, and therefore, fits in with content standard 6.G.2.

Solution: Using the formula $V = lwh$

The change in water height is $8 \text{ cm} - 6 \text{ cm} = 2 \text{ cm}$. The volume of the displaced water is the product of the length, width, and change in the height of the water, and $24 \times 30 \times 2 = 1440$. The volume of the stone is the same as the volume of the displaced water, we know the stone has volume 1440 cm.

July 3

Twenty lawns can be mowed in 35 hours. The lawns per hour are about 0.57 or just over a half of a lawn per hour.

July 7

The prime factorization of 32 is 2^5

July 8

The given solution shows some possible equivalent expressions, but there are many variations possible.

- The distance to school, and therefore home, is d . Thus, the student rides $(d + d)$ miles in one day. Equivalently, she rides $(2d)$ miles in one day.
- Repeatedly adding the distance traveled in one day for each school day of the week, we find that in one week the student travels $(2d + 2d + 2d + 2d + 2d)$ miles.
- Equivalently, she travels $5(2d)$ or $(10d)$ miles in a week.

July 10

Factors of 48: 1, 2, 3, 4, 6, 8, 12, 16, 24, 48

Factors of 64: 1, 2, 4, 8, 16, 32, 64

Common factors: 1, 2, 4, 8, 16

Greatest Common Factor (GCF): 16

July 9

N = the number of people

$$100 + 5n$$

July 14

We can count from -28 up to 65 . If Anchorage, Alaska was 28 degrees warmer than it is on this winter morning, the temperature would be zero degrees. If Anchorage, Alaska was 65 degrees warmer still, the temperature would be 65 degrees, the same temperature as Miami, Florida. In order for Anchorage, Alaska to be the same temperature as Miami, Florida, Anchorage would have to be $28+65=93$ degrees warmer than it is. Thus, Miami is 93 degrees warmer than Anchorage.

July 15

$167 - 88 = 79$, so Seth needs to make $\$79$. Since $79 \div 7.25 \approx 10.9$, Seth will have to work about 11 hours to make enough money to buy the skateboard.

July 16

- She could ride 1 mile in 7.5 minutes and 2 miles $(1 + 1)$ in 15 minutes $(7.5 + 7.5)$.
- She rides $150/20$ minutes per mile which is 7.5 minutes per mile. So it would take her 45 minutes to ride 6 miles because $6 \times 7.5 = 45$.
- If she rides 2 miles in 15 minutes, then she can ride 4 miles in 30 minutes and 8 miles per hour.

July 17

$$X = 5$$

July 18

This question is equivalent to asking, "What fraction of $1/2$ liter is $3/8$ liter?" We can write this symbolically as $(?) \times (1/2) = 3/8$ which is equivalent to the division problem $3/8 \div 1/2 = ?$

$$\text{So: } 3/8 \div 1/2 = 3/8 \times 2/1 = 6/8 = 3/4$$

Alisa drank $3/4$ of the juice that was in the bottle.

July 23

2,520

July 24

- If we let w denote the length of the morning walk, Mia walks $w + 2.5w$ or $3.5w$ miles each day.
- At the end of the week she has walked 7 times as far and she said that this was 30 miles.
- Solving the equation $24.5w = 30$, we have $w = 30/24.5 \approx 1.2$ miles.
- Therefore the distance of Mia's morning walk is about 1.2 miles.

July 25

Examples:

30 and 60

July 28

Ben is incorrect. It is common for students to compare negative numbers as if they were positive and to assume that the one with the greatest magnitude is the greatest number. However, -23 is to the left of -14 on the number line, and so it is less than -14 . Thus $-23 < -14$ and Alaska was colder.

July 30

Yes, it will form a triangular prism.

July 31

The Patriots scored 32 points and the Giants by 12.

August 6

The seventh number would be 11.

August 7

Sophia's dad paid \$43.25 for 12.5 gallons of gas. If we think of a gallon of gas a group, we know that the cost of 12.5 groups is \$43.25. The question we are asked is, "What is the cost of one gallon?" which is the same as asking, "How many dollars in one group?" To find the answer to this question, we must evenly distribute the \$43.25 amongst the 12.5 groups. This meaning of $\$43.25 \div 12.5$. So the cost of one gallon of gas is $\$43.25 \div 12.5 = \3.46

August 8

Bryan must sell 40 candy bars.

August 11

They are not equivalent expressions.

August 13

$-55 > -89$

The average temperature on Mars is warmer than the coldest temperature on Earth.

August 14

The largest possible area would be a square with a side length of 30. The area would be 900 square inches.

August 15

It would take Terri $16 \frac{2}{3}$ minutes to swim 20 laps.

August 19

The smallest three-digit number that is divisible by exactly three different prime numbers is 102. It is divisible by 2, 3 and 17.

August 20

This problem requires students to understand that multiplication is understood when numbers and variables are written together and to use the order of operations to evaluate.

$$(3 \times 4) + (2 \times 2.4) =$$

$$12 + 4.8 = 16.8$$

August 21

$$A = 2$$

$$B = 1$$

$$C = 7$$

$$D = 8$$

August 22

The sum of the first ten prime numbers is 129.

August 25

Death Valley is located below sea level. We know this because its elevation is negative. Sea level is the base for measuring elevation. Sea level elevation is defined as 0 ft. All other elevations are measured from sea level. Those places on Earth that are above sea level have positive elevations, and those places on Earth that are below sea level have negative elevations. Thus, Death Valley, with an elevation of -282 feet, is located below sea level.

To find out how much higher Denver is than Death Valley, we can reason as follows:

Death Valley is 282 feet below sea level. Denver is 5280 above sea level. So to go from Death Valley to Denver, you would go up 282 feet to get to sea level and then go up another 5280 feet to get to Denver for a total of $282 + 5280 = 5562$ feet. Thus, Denver, Colorado is 5562 feet higher than Death Valley, California.

August 26

$$V = lwh = 20 \times 20 \times 16 = 6400 \text{ cm}^3$$

If Amy fills the tank $\frac{3}{4}$ of the way, the height of the water in the tank will be $\frac{3}{4} \times 16 = 12$ cm, while the width and the length remain unchanged. So the volume of the water will be: $V = lwh = 20 \times 20 \times 12 = 4800 \text{ cm}^3$.

August 27

Find the area to paint, then the number of gallons to cover the area.

First Alexis needs to find the area she needs to paint. Alexis will need to paint two 30 foot - by - 50 foot walls and two 30 foot - by - 80 foot walls:

$$2 \times 30 \text{ feet} \times 50 \text{ feet} = 3000 \text{ square feet}$$

$$2 \times 30 \text{ feet} \times 80 \text{ feet} = 4800 \text{ square feet}$$

Alexis will need to paint $3000 + 4800 = 7800$ square feet.

Next, the table below shows how many square feet she can cover with different quantities of paint. 20 gallons is a little more than she needs, so she can check 19 gallons and 18 gallons:
