Name:

Period: Note to student: This packet should be used as practice for the Geometry 22 final exam. This should not be the only tool that you use to prepare yourself for the exam. You must go through your notes, re-do homework problems, class work problems, formative assessment problems, and questions from your tests and quizzes throughout the year thus far.

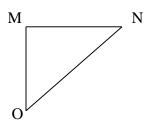

Section 1

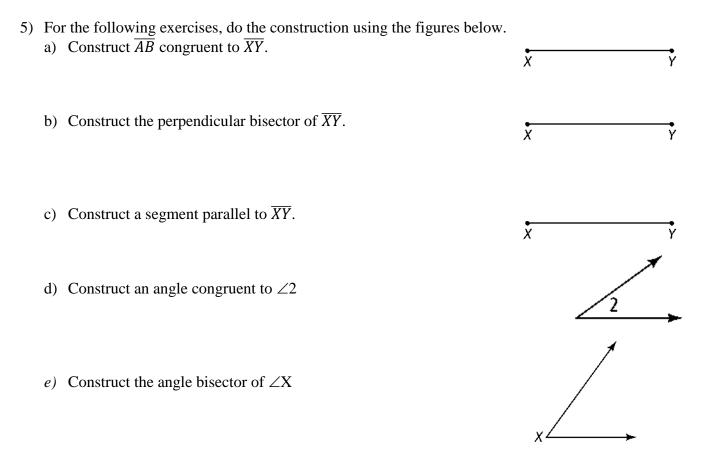

- 1) Classify each statement as true or false, and explain your reasoning in each false case.
 - a) Two planes intersect in only one point.
 - b) A ray starts at one point on a line and goes on forever.
 - c) The intersection of 2 planes is one line _____
 - d) Any four points are collinear.
- 2) Describe the difference and similarities of skew and parallel lines.
- *3)* Use the figure below for #6-14. Note that \overrightarrow{RN} pierces the plane at N. It is not coplanar with V.
 - a) Name two segments shown in the figure.
 - b) What is the intersection of \overleftarrow{CM} and \overleftarrow{RN} ?
 - c) Name three collinear points.
 - d) What are two other ways to name plane V?
 - e) Are points R, N, M, and X coplanar?
 - f) Name two rays shown in the figure.
 - g) Name the pair of opposite rays with endpoint N.
 - h) \overrightarrow{AN} is the same as \overrightarrow{NA} . True or False?
 - i) ANX names a plane. True or False?
- 4) Construct and label the following:
 - a) The circumscribed circle of ΔJKL

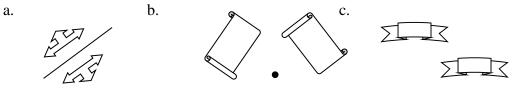

b) The inscribed circle of ΔMNO

6) Below each figure write the name of the kind of rigid transformation shown.

Section 2

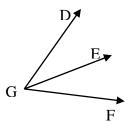

Complete the following statements:

- 1) $\angle ABC$ and $\angle BCD$ are complementary. $m \angle ABC = 6x^{\circ}$ and $m \angle BCD = 12x^{\circ}$. Find x.
- 2) \angle ABC and \angle BCD are supplementary. m \angle ABC =40x° and m \angle BCD = 20°. Find x.
- 3) AB = 2x + 1, BC = 16 inches, AC = 5x 4. Use the diagram to solve for *x*:

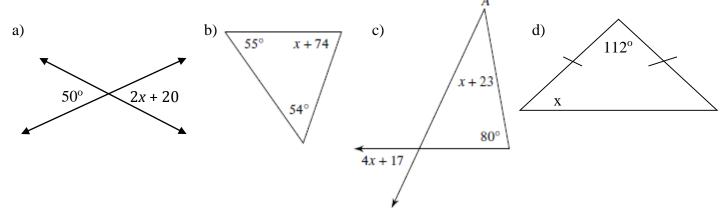

4) Solve for y: $m \angle DGF = 12y - 5$, $m \angle EGF = 24^{\circ}$,

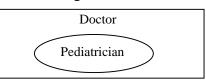

$$m\angle DGE = 5y + 6$$

- 5) \overline{WS} bisects $\angle BWV$. m $\angle BWS = 32^{\circ}$. What is m $\angle BWV$?
- 6) Determine the value of *x*:

- 7) Use the following steps to determine whether the given statement is a definition. *Linear pairs are supplementary, adjacent angles.*
 - a) Conditional statement
 - b) Converse
 - c) Biconditional statement
 - d) Decide whether the statement is a definition. Explain your reasoning.
- 8) Write the conditional statement that corresponds to the Venn diagram below:

т

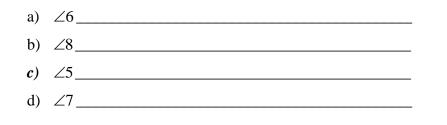

6

 $\frac{3}{2}$

Δ

Section 3

1) For the following exercises, refer to the diagram below. Lines m and n are parallel. Name all angles congruent to the given angle and give the theorems or postulates that justify your answer. $n = \frac{1}{\sqrt{2}}$

2) For the figure to the right $m \angle BCD = 160 - 3x^{\circ}$, and

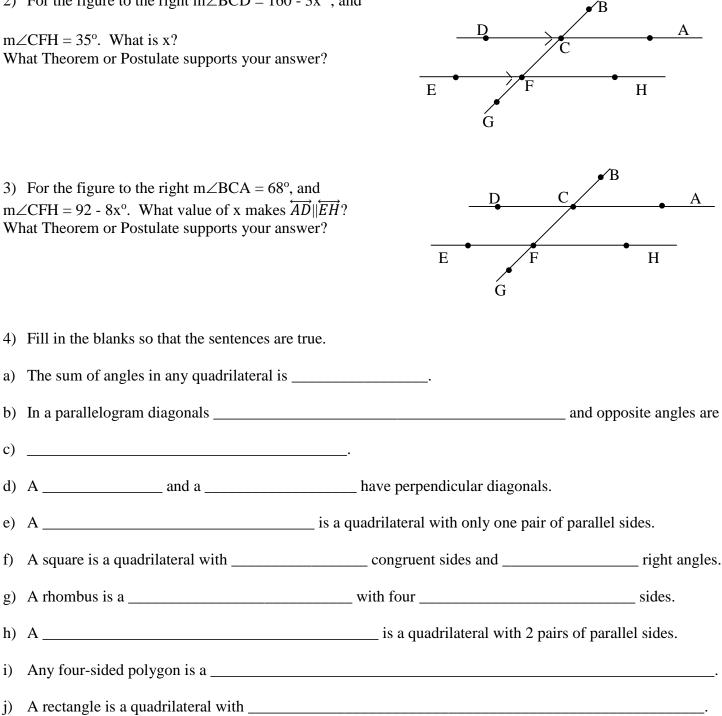

c)

f)

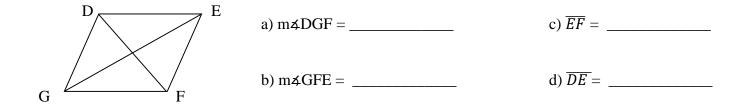

g)

i)

i)

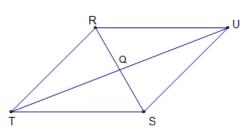

5) Polygon DEFG is a parallelogram. GF = 3 in, DG = 2 in, $m \neq GDE = 110^{\circ}$

6) *MNOP* is a rhombus. If $m \angle MNO = 88^\circ$, find each of the following:

a) $m \angle NOP =$ _____

- b) *m∠OPG* = _____
- c) $m \angle OGN =$ _____
- 7) Parallelogram *RUST*

$m \angle RUS = \58^\circ \$	$RU = \30cm\$	$RQ = \9cm \$
$m \angle UST = $	$US = \28cm \$	<i>QS</i> =
$m \angle STR = _$	<i>ST</i> =	<i>TQ</i> =
$m \angle TRU = $	<i>TR</i> =	<i>QU</i> =
	<i>RS</i> =	$UT = \50cm__$

В

С

- 8) Polygon *ABCD* is a rhombus. AB = 4x + 2 and AD = 30. What is x? Give a reason for your equation.
- 9) Polygon ABCD is a rectangle. \overline{AC} and \overline{BD} intersect to E. $AE = 12 \, ft$. What is BD?
- 10) Use trapezoid *TRAP* to the right to answer the following: If $m \angle T = 60^{\circ}$ find the measures of the other angles. $m \angle R = _ \qquad m \angle A = _ \qquad m \angle P = _$ 11) Find the following.

c) What is \overline{NM} called?_____

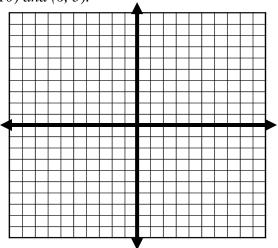

12) Find the **slope, midpoint**, **and length** of each of the following segments whose endpoints are given.

a) (-1, 4) and (4, 10) b) (8, 0) and (10, 6)

13) Lines that are parallel have _______ slopes and lines that are perpendicular have ______ slopes.

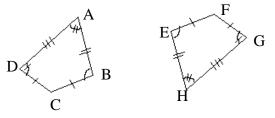

14) For the following, a quadrilateral has vertices (2, -5), (-8, -5), (-2, 10) and (6, 5).

- a) Graph the quadrilateral on the grid provided.
- b) What type of quadrilateral is this? Show ALL work necessary to justify your answer.

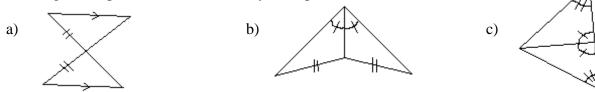

Section 4

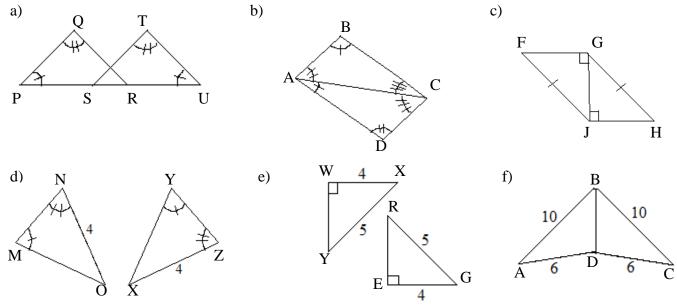

1) Write a congruency statement for the following polygons. Why are they congruent?

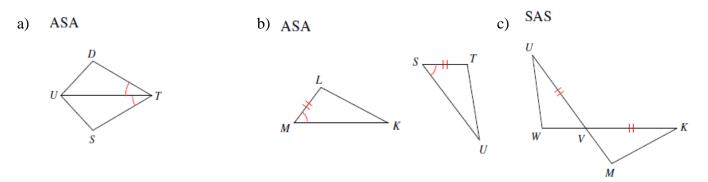

2) Determine whether each pair of triangles can be proven **<u>congruent</u>** by using the SSS, SAS, ASA or AAS congruence postulates. If so, identify what postulate is used.

 Determine whether each pair of triangle scan be proven congruent by using the SSS, SAS, ASA, AAS or HL congruence postulates. If so, identify what postulate is used and write a congruency statement.

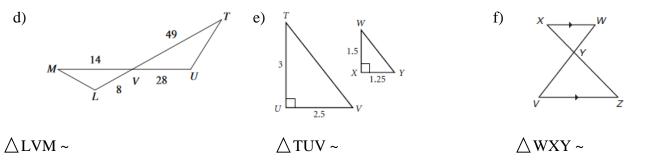

4) Label and sate what additional information is required in order to know that the triangles are <u>congruent</u> for the reason given.

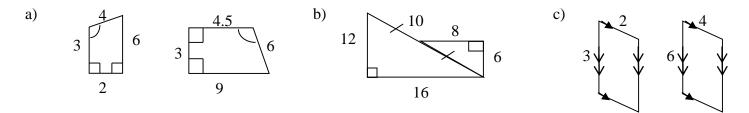

5) Determine whether or not the triangles below are **similar** (you may need to do a little work to figure it out) by AA, SSS, or SAS, or none of them. If they are similar, complete the similarity statement.

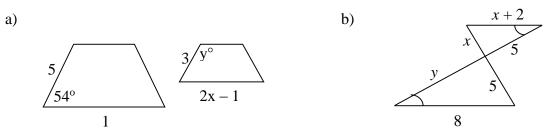

6) Determine whether the polygons are <u>similar</u>, not <u>similar</u>, or <u>not enough information</u> given. If they are similar, determine the scale factor comparing the first to second figure.

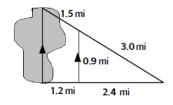

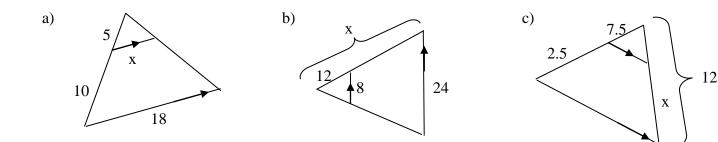

7) The following polygons are similar; find x and y.

10) Solve for x.

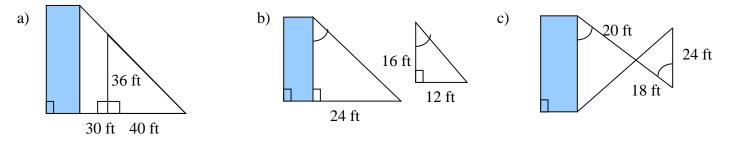

- 8) $\triangle AFN \sim \triangle DPG$, AF = 2 cm., FN = 3 cm., DG = 10 cm., and PD = 8 cm. Find AN. If $m \angle A = 36^{\circ}$, what is $m \angle D$?
- 9) Use the following image to explain why the two triangles are similar, then estimate the length of the lake.

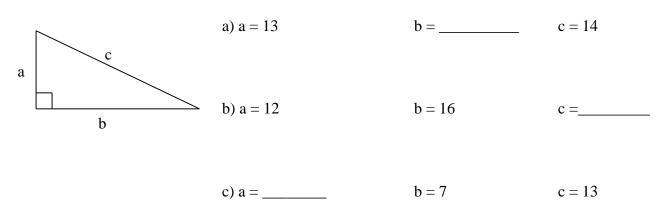

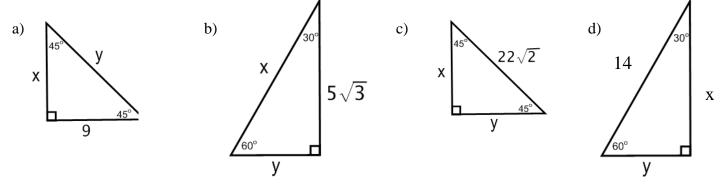

11) Use the diagram to find the height of each building.

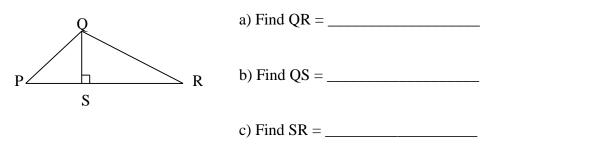

Section 51) For # 1-3 two lengths of the right triangle are given. Find the missing length.

- 2) A triangle has side lengths given below. Determine what type of triangle each set is (acute, obtuse, or right Show work to support your answer.
- a. 24, 40, and 32 b. 30, 24, and 19 c. 6, 14, and 11
- 3) Find the missing side lengths. Leave your answers in radical form.

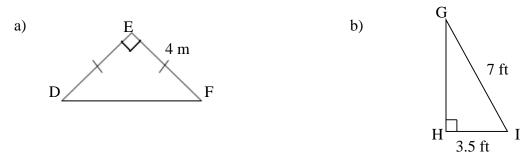

4) For the following, ΔPQR , $m \neq PQR = 90^{\circ}$, PQ = 6, $m \neq QPS = 60^{\circ}$, and PR = 12.

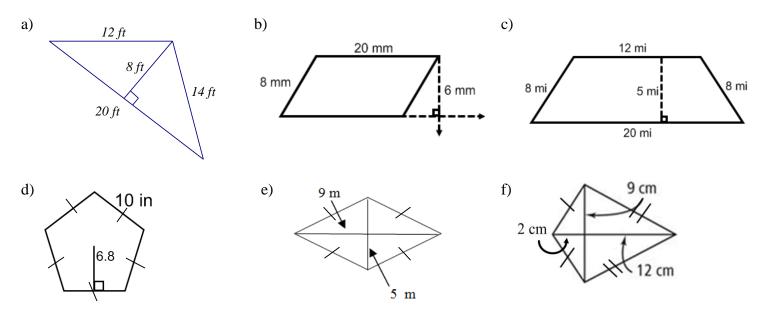

d) Find the area of $\Delta PQR =$ _____

5) Find the area of each figure. Round your answers to the nearest tenth.

6) Find the area of the following figures.

7) Find the circumference AND area of each figure. Leave your answer in terms of π .

8) Round your answers to 15a) to the nearest hundredth.

C =

9) Find the radius of each circle from the given information. Round to the nearest tenth if necessary.

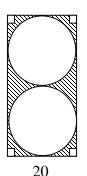

A =

a) Area = 256π in² b) Circumference = 120 ft

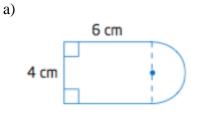

10) If the area of a parallelogram is 100 cm^2 and the length of the base is 25 cm, what is the height?

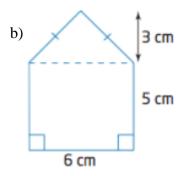

- 11) If the area of a parallelogram is 45 ft^2 and the height is 3 ft, what is the length of the base?
- 12) If the area of a trapezoid is 250 in^2 , the lengths of the bases are 23 in and 27 in, what is the height?
- 13) If the area of a triangle is 343 u^2 and the height is 14 u, what is the length of the base?

14) Find the area of the shaded region.

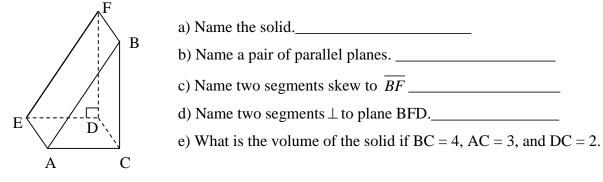

15) Find the area of the composite figures below.

Section 6

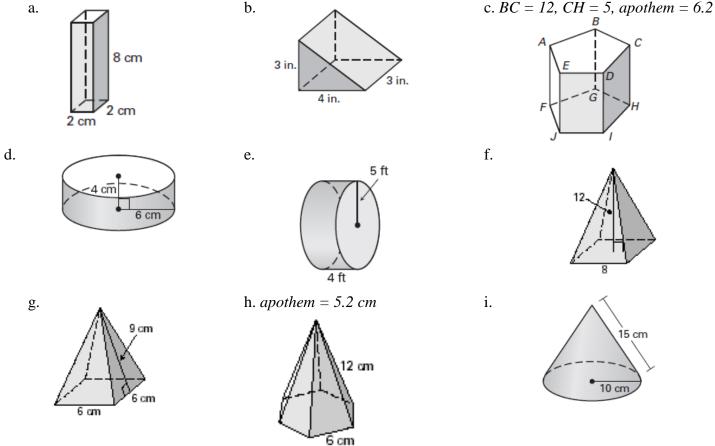

1) For the following, refer to the solid below.

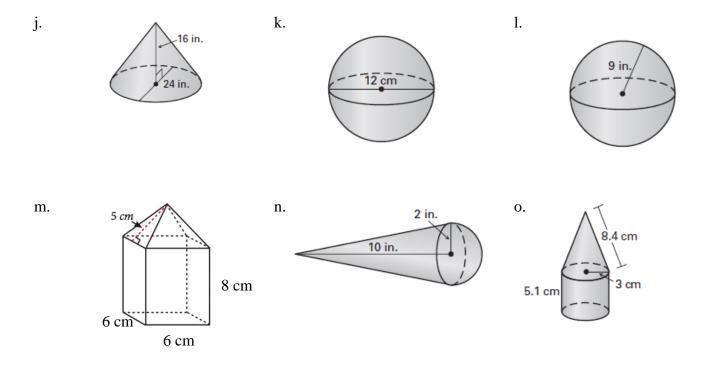

2) What is the slant height of a right cone with a radius of 8 in. and a height of 14 in.

Find the Surface Area <u>and</u> Volume of each <u>right prism</u>. Round to the hundredth if necessary.

3) Find the Surface Area, Lateral Area, and Volume for the following solids. Give an exact answer.

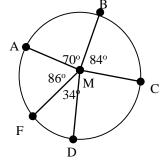

- 4) The surface area of a square pyramid is given by 540 cm² and the side of the square is 10 cm. Find the slant height of the square pyramid.
- 5) The volume of a cylinder is 960 π cubic inches. The height of the cylinder is 15 inches. Find the radius.
- 6) If a cylinder has surface area of 128π sq ft, and the height of the cylinder is 12 feet, find the radius and the volume.
- 7) The volume of a spherical ball is $5,000 \pi$ cm³. What is the radius of the ball?

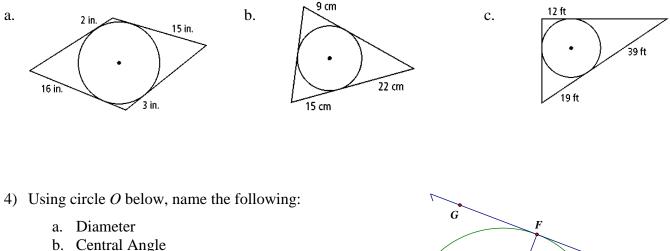

Section 7

1) Find the degree measures of each arc or angle by using the central angle measures given in $\bigcirc M$

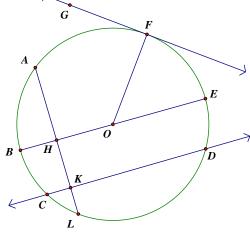

a) <i>mÂC</i>	b) <i>mFA</i>
c) <i>mCBF</i>	d) <i>mDB</i>
e) <i>mADC</i>	f) <i>mDCA</i>
g) <i>m</i> 4 <i>DMC</i>	

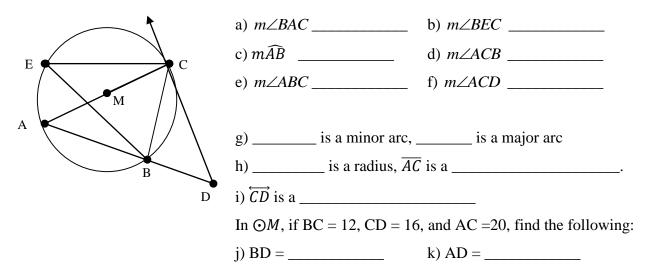

3) Each polygon circumscribes a circle. What is the perimeter of each polygon?

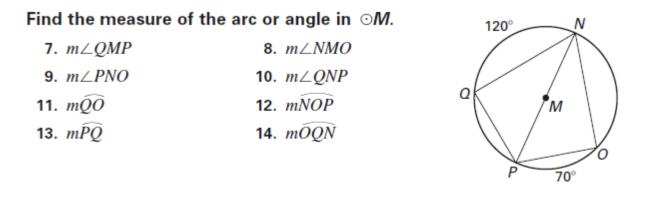

- U. Central Alig
- c. Minor Arc
- d. Major Arc
- e. Semicircle
- f. Radius
- g. Tangent
- h. Point of Tangency

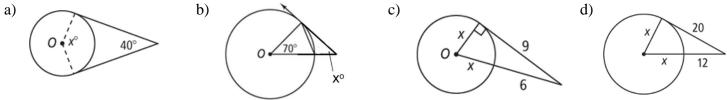

5) For the following, in $\bigcirc M$, \overline{AC} is the diameter, \overrightarrow{DC} is tangent to the circle at point *C*, and $m\widehat{BC} = 78^{\circ}$.

15) What is the value of x? Lines that appear to be tangent are tangent. Round to the nearest hundredth if necessary.

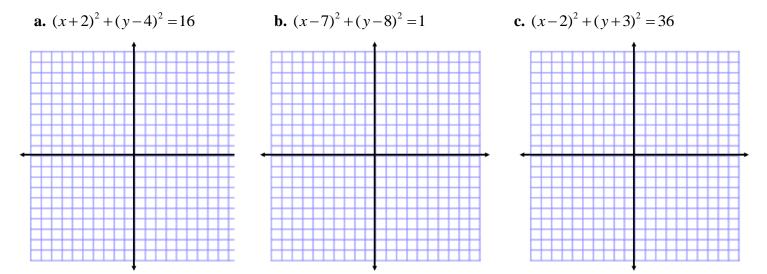

16) Write the equation for the circle with center (2, 4) and radius = 7 in

17) Write the equation for the circle with center (-3, 1) and diameter = 18 in

18) Find the center and radius of the circle: $(x-7)^2 + (y+12)^2 = 144$

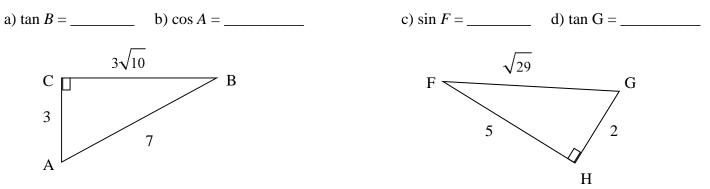

19) Find the center and radius of the circle: $(x + 5)^2 + (y + 8)^2 = 225$

20) Graph the circle on the coordinate plane.

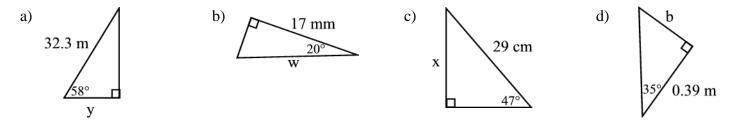

Section 8

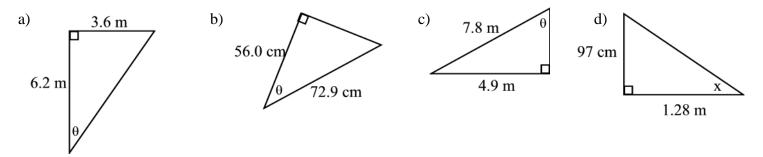

1) Using the triangles below, determine the trigonometric ratio. Leave your answers as simplified fractions.

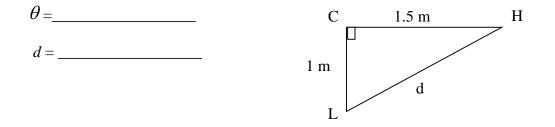

2) Find the marked side of each of the following triangles.

3) Find the value for each of the marked angles.

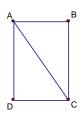

- 4) A skateboarding ramp is 12 in. high and rises at an angle of 17°. How long is the base of the ramp? What is the length of the ramp? Round your answer to the nearest inch.
- 5) Joey is walking home from the library. He can walk for 1 mile along the street, then turn right and walk 1.5 miles along another street; or he can cut across a large field straight to his house. At what angle, θ , should he head off from the library, and how far, *d*, should he cut across the field?

Proofs

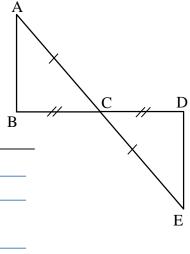

1) Given: $\angle B$ and $\angle D$ are right angles, $\overline{AB} \cong \overline{CD}$ Prove: $\angle DAC \cong \angle BCA$

Statements	Reasons
1. $\angle B$ and $\angle D$ are right angles, $\overline{AB} \cong \overline{CD}$	1.
2. $\triangle ADC$ and $\triangle CBA$ are right triangles	2.
3. $\overline{AC} \cong \overline{CA}$	3.
$4. \Delta ADC \cong \Delta CBA$	4.
5. $\angle DAC \cong \angle BCA$	5.

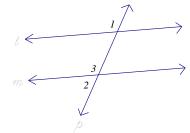

2)

Fill in the blanks in the table below to prove $\angle CBA \cong \angle CDE$

$\overline{CB} \cong \overline{DC}$ $\overline{CA} \cong \overline{CE}$ $\angle BCA \& \angle DCE$ are vertical angles $\angle BCA \cong \angle DCE$
∠BCA&∠DCE are vertical angles
angles
∠BCA≅∠DCE
∆BCA≅∆DCE

3) Given: $m \angle 1 = 100^\circ$, $m \angle 2 = 80^\circ$ Prove: $l \Box m$

Statements	Reasons
1. $m \angle 1 = 100^\circ$, $m \angle 2 = 80^\circ$	1. Given
2. $\angle 2$ and $\angle 3$ form a linear pair	2.
3. $\angle 2$ and $\angle 3$ are supplementary	3. Linear Pair Property
4. $m \angle 2 + m \angle 3 = 180^{\circ}$	4.
5. $80^{\circ} + m \angle 3 = 180^{\circ}$	5.
6. $m \angle 3 = 100^{\circ}$	6.
7. $m \angle 1 = m \angle 3$	7.
8. $\angle 1 \cong \angle 3$	8.
9. $\angle 1$ and $\angle 3$ are Corresponding Angles	9.
10. $l \square m$	10.

4) Given: $\overline{GE} \cong \overline{OE}$; $m \angle E = 38^{\circ}$ Prove: $m \angle G = 71^{\circ}$

Statements	Reasons
1. $\overline{GE} \cong \overline{OE}$	1. Given
2. $\angle G \cong \angle O$	2.
3. $m \angle G = m \angle O$	3.
4. $m \angle E = 38^{\circ}$	4.
5. $m \angle G + m \angle E + m \angle O = 180^{\circ}$	5.
$6. m \angle G + 38^\circ + m \angle G = 180^\circ$	6.
7. $2 \cdot m \angle G + 38^\circ = 180^\circ$	7.
8. $2 \cdot m \angle G = 142^{\circ}$	8.
9.	9.
