America and the American Dream: Description

In eighth grade, students engage in the study of events, movements, people, and documents in United States History from the Revolutionary Era to the present with a focus on inquiry into defining the American Dream and the evolution of American values. The course focuses on eight themes (four primary themes: Cultural Diversity and a Uniquely American Identity; Government, Politics, and Civic Participation; The Struggle for Freedom, Equality, and Social Justice; and The Role of the United States in World Affairs, and four supporting themes: The Impact of Science and Technology on Society; Economic Prosperity and Equity; The Impact of Geography on United States History; and The Role of Connecticut in United States History). These eight themes are woven throughout eight eras of study. Throughout the year, students will continually evaluate and revise the definition of the American identity and assess how each era has brought the nation closer or further away from the evolving American Dream.

Objectives and Standards:

Historical Understandings: Shown as content objectives, these goals define what students should know about United States history upon completion of each unit. These understandings are drawn from the *Connecticut Social Studies Frameworks* (2015), with input from various other state frameworks, as well as the *National Standards for History* developed by the National Center for History in the Schools. These understandings represent the record of American aspirations, accomplishments, and failures in the themes described above. They also provide students with the historical perspectives required to analyze contemporary issues and problems confronting citizens today.

Historical Thinking / Inquiry Skills: These standards center on four dimensions driven by the use of questions to spark curiosity, guide instruction, deepen investigation, acquire rigorous content, and enable students to apply knowledge and ideas in real world settings so they can become active and engaged citizens. Drawn from the *Connecticut Social Studies Frameworks* (2015) and the *C3 Social Studies for the Next Generation National Framework* (2013), these standards enable students to evaluate evidence, develop comparative and causal analyses, interpret the historical record, and construct sound historical arguments and perspectives.

The Roots of American Values: Revolution and the New Nation (1754-1824)

Overview

In this unit, students will explore the roots of American values and the American dream focusing on the period from approximately 1754 through 1824. In understanding the causes of the American Revolution, students will investigate the consequences of the French and Indian War, and analyze the political, ideological, and economic origins of the Revolution by comparing various perspectives on British colonial policy, including the legitimacy of asking the colonies to pay a share of the costs of empire. In thinking about the course of the Revolutionary War, it is essential to study the fundamental principles of the Declaration of Independence, the main stages of the war, and the reasons for American victory. Students will also investigate the diversity of interests in American society in the postwar era by exploring how the Constitution was created, ratified, and amended with the Bill of Rights after dramatic debate in every state. In studying the post-Revolutionary era, students will understand how the institutions and practices of government were implemented and revised between 1787 and 1824 to create the foundation of the American political system.

Unit Content Objectives

At the conclusion of this unit, students will be able to:

- Analyze the causes of the American Revolution and the ideas and interests involved in forging the revolutionary movement.
- Analyze the reasons for the American victory in the Revolutionary War.
- Evaluate the impact of the American Revolution on politics, economics, and society.
- Analyze the institutions and practices of government created during the Revolutionary era and how they were revised between 1787-1824 to create the foundation of the American political system based on the U.S. Constitution and the Bill of Rights.

Expansion and Reform (1801-1861)

Overview

The new American republic prior to the Civil War experienced dramatic territorial expansion, immigration, economic growth, and industrialization. The increasing complexity of American society and the growth of the competing forces of nationalism and sectionalism put incredible pressure on the evolution of American values. One focus of this era is the vast territorial expansion between 1801 and 1861, as restless Americans pushed westward across the Appalachians, then across the Mississippi, and finally on to the Pacific Ocean. Students should study how Americans, driven by the ideology of “Manifest Destiny”, and American optimism, innovation, and imagination flocked to the western frontier. While studying how the frontier experience permanently stamped the American character, students should explore its controversial aspects: the removal of many Indian nations, acquisition of a large part of Mexico through the Mexican-American War, and the abrasive encounters with various groups in the west. A second focus of this unit is exploring how the industrial revolution, increased immigration, the rapid extension of slavery, and the westward movement changed the lives Americans and increased sectional conflict.

Unit Content Objectives

At the conclusion of this unit, students will be able to:

- Analyze United States territorial expansion between 1801 and 1861, and how it affected relations with external powers and Native Americans.
- Examine how the industrial revolution, increasing immigration, the rapid expansion of slavery, and the westward movement changed the lives of Americans and led toward regional tensions.
- Assess the competing forces of expansionism, nationalism, and sectionalism.
- Assess the extension, restriction, and reorganization of political democracy after 1800.
- Evaluate the cultural and social reform movements in the antebellum period.

Themes Emphasized and Unit Compelling Questions

Supporting Themes: Students will apply disciplinary concepts to investigate compelling questions such as:

The Development of Industrial America (1870-1900)

Overview

From the era of Reconstruction to the end of the 19th century, the United States underwent an economic transformation that involved the maturing of the industrial economy, the rapid expansion of big business, and the rise of national labor unions. During this unit, students can begin to see a resemblance to the possibilities and problems that our society faces today. This period also witnessed unprecedented immigration and urbanization, both of which were indispensable to industrial expansion. American society became even more diverse as immigrants entered in massive numbers from southern and eastern Europe, and also from Asia, Mexico, and Central America. Related to this continuing theme of immigration, students will explore the search for national unity and tolerance.

The Emergence of Modern America (1890-1930)

Overview

This unit focuses on the evolution of American values from approximately 1890 to the eve of the Great Depression. Students will explore how the progressive movement attempted to deal with the problems of industrialization, urbanization, and political corruption and develop a political process that would be more responsive to the distinctive needs of an industrial society. During this era, the United States became much more involved global affairs and sought territorial expansion throughout the world for economic, political, and military reasons. All issues of American foreign policy have their origins in the emergence of United States as a world power in the Spanish American War at the end of the 19th century and the involvement of the United States in World War I. Students will explore the complexities of foreign policy today by studying the difficulties of maintaining neutrality while acquiring the role of an economic power with global interests and wishing to foster democracy around the world. In the postwar period the prosperity of the 1920s and the domination of big business will be explored, as well as the social tensions, cultural movements, and political developments of the era.

Unit Content Objectives

At the conclusion of this unit, students will be able to:

- Demonstrate an understanding of the development of American expansionism and imperialism.
- Evaluate the changing role of the United States in world affairs through World War I.

The Great Depression and World War II (1929-1945)

Overview

This unit focuses on the ways in which American society was forever altered by the massive crises of the Great Depression and World War II. The Great Depression and the New Deal deserve careful analysis by students for many reasons. Americans in the 1930s endured, and eventually conquered, the greatest economic crisis in American history. The depression brought deep changes in people's attitudes toward government's responsibilities and the New Deal set in place legislation that reshaped modern American capitalism. World War II also demands careful attention. The war solidified the nation's role as a global power and brought about social changes that established reform agendas that would last for the remainder of the 20th century. Students will assess carefully the causes of the war and reason for American involvement, the course of the war, and the collapse of the Grand Alliance in the postwar period. Students will also evaluate the social effects of war on the homefront, such as internal migration to war production centers, the massive influx of women into previously male job roles, and the attempts of African Americans and others for social equality.

Unit Content Objectives

At the conclusion of this unit, students will be able to:

- Analyze the causes of the Great Depression and how it affected American society.
- Evaluate how the New Deal addressed the Great Depression, transformed American federalism, and expanded the role of government.
- Examine and assess the causes of World War II and the reasons for American involvement in the war.
- Analyze the course of World War II, including the major turning points and significant events, along with its reshaping of the U.S. role in world affairs.
- Examine the character of the war at home including mobilization, gender roles, the impact on science and technology, and the implications on civil liberties.

Postwar United States (1945-1973)

Overview

This unit focuses on postwar America from 1945 to approximately 1973. This era witnessed an economic boom and social transformation that was unprecedented in American history. Students will explore how the postwar boom and new technologies produced grand changes in consumer culture, American education, suburbanization, the return to domesticity for many women, the character of corporate life, and cultural mores. The Cold War set the framework for global politics for 45 years after the end of World War II. The Cold War so strongly influenced domestic politics, the conduct of foreign affairs, and the role of government in the economy after 1945 that is essential for students to examine its origins and the forces behind its continuation into the late 20th century. Students will also focus attention on the U.S. government's anti-Communist strategy of containment in Asia and the circumstances that would involve the United States in the bloody, costly wars in Korea and Vietnam. This era also witnessed the monumental struggle for racial and gender equality and for the extension of civil liberties. Students will assess the strategies of the civil rights movement and evaluate the results for various groups.
